For residents who choose an international health elective in a low-income country, the challenges and differences in health care systems and available resources are vast, but such electives can also offer exposure to a high operative volume with potentially fewer institutional and administrative obstacles.

Les résidents qui font leur stage dans un pays à faible revenu auront de nombreux défis à relever, notamment les différences énormes entre les systèmes de santé et la disponibilité des ressources. Ces stages peuvent néanmoins avoir l'avantage d'exposer à un fort volume opératoire dans un contexte où les obstacles institutionnels et administratifs sont parfois moindres.
